

Water Report

May 2017

The water usage for the past month has been minimal but is gradually increasing. As summer draws near and more visitors arrive in Coffman we anticipate water consumption to double. Everything at the water plant has been operating smoothly and all monthly sampling requirements are on schedule.

We ordered and received parts to have on hand for upcoming water service installations. We now have enough parts in stock for at least two water service installs.

I recently put in the water meter for the church camp so they will have service for the summer.

I have had Tyler Rental come up to pump 4 septic tanks so far this spring. I will continue to schedule their services as I check septic tanks this summer.

Have a great spring!
