

POW Watershed Association (POWWA) Report, May 2017

Greetings!

POW LAT (Prince of Wales Landscape Assessment Team)

The purpose of POW LAT is for POW stakeholders to assist the USFS in the development of a landscape level assessment for the island over the next 10-15 years. The team will provide recommendations related to timber, recreation, fish/wildlife habitat, and watershed restoration.

POWLAT will have its last meeting May 18 and May 19 if need be. Timber proposals will be finalized and hopefully a complete list of projects will move on to the FS from the group. I am including the URL for the POWLAT website which uses the POWCAC website to distribute information: <https://www.powcac.org/other-projects/>

Check it out, as there is a complete list of proposed projects.

Luck Watershed Restoration

KK Prussian, hydrologist, for the USFS, would like to take interested folks and other stakeholders out to some of the restoration work done in the Luck watershed. The intent is to tour some of this work and to hear from local people about this and other proposed work in the watershed. Right now she is proposing a date during the week starting June 12. I will keep you posted and will work with Jean to get the information out to Coffman residents.

Coffman Creek Assessment Project

I have asked for a brief field report from TNC, the group working on summarizing the findings of the assessment work done in May 2016. The summary has not been completed yet. Again, I will get it to the council when it is finalized.

Please contact me if you have any questions or concerns regarding local watersheds.
